Discover the 4K difference

4K in a dashcam is not a gimmick. It is a game-changer. It is not about playing videos on a giant screen—although you could do that too. It's about providing video proof. A dashcam is only as good as its ability to capture crucial details—usually license plate numbers. The 8-megapixel 4K UHD sensor does just that by capturing 4 times as many pixels as in Full HD. And with its **fast shutter speed**, details are frozen in place. Just pause and zoom in.

Capture everything front and rear

Front camera: 8 megapixels CMOS sensor recording in **4K Ultra High Definition** (3840x2160) at 30FPS.
Rear camera: 2.1 megapixels Sony STARVIS™ recording in Full HD (1920x1080) at 30FPS. The front camera's **wide 155-degree angle** takes full advantage of the 4K UHD resolution. The rear camera records in Full HD at a 139-degree angle with outstanding low-light sensitivity.
Native Parking Mode with built-in voltage monitor to protect your vehicle battery (hardwiring cable included).

With the free BlackVue Cloud service, check on your car from anywhere, anytime. (*Wireless connection required.)
