PathFindIR II is a powerful thermal night vision camera that lets you see clearly in total darkness by using thermal imaging technology.

NOTE: this SKU is for over seas export use and in many countries does not require a license.

Headlights usually only let you see about 450' straight ahead, but PathFindIR II sees heat not light, so you can see everything in front of you up to four times farther down the road. Now you can see clearly, night and day, in good weather and bad, without being blinded by the glare of oncoming headlights.

Unique in the industry, PathFindIR II is an automotive-qualified system that is hermetically sealed, rated to IP-69, with an integrated, automatic window heater. It uses 12 VDC input power, and standard NTSC video is output for compatibility with most monitors or displays.

Before purchasing this unit, you must download, fill out and return the FLIR Customer Purchase Agreement and FLIR End User Certificate (download links below). Contact NAV-TV with any questions.

This product is export-controlled under ECCN 6A003.b.4.b, and it is a violation of U.S. law to export this product to certain countries without an export license issued by the U.S. Department of Commerce (www.bis.doc.gov).
